Key Challenges to Greening of RPJMN

Roundtable on Greening the National Development Plan
JW Mariott Hotel Jakarta
21 June 2013
Indonesian REDD+ Strategy

1. **Institutions and processes**
   Setup of institutions and systems that are crucial to the success of REDD+ as well as capability building in existing ministries and agencies.

2. **Legal and regulatory framework**
   Review and revision of regulations and policies.

3. **Strategic programs**
   Strategic activities that lead to the development and the realization of REDD+ programs and projects.

4. **Paradigm shift**
   Awareness building and professional as well as technical assistance to communities, organizations, and other entities.

5. **Stakeholder engagement**
   Interaction with key groups (e.g., donor management, multi-stakeholder approach, benefit sharing mechanism, safeguard oversight, communications).
The Need for ONE Database

Example:
Overlay of forestry-plantation-mining areas in Pasir District (East Kalimantan)

Protected Forest and Conservation Area...

...overlay with HPH and HTI areas...

...overlay with plantation areas...

...overlay with mining area

Integrated license database can be used as starting point to solve license overlaps
Strategic Initiatives, based on current realities

1. Common and high integrity maps
2. Clean and Clear status of land – current rights, allocation and commitments
3. Credible and high integrity regulation and law enforcement practices
4. Mitigation of predictable disruptions (disasters, uncontrollable clearing practices)
5. Clear and well principled Spatial Plan
6. Continuity and transparency of land use change status
7. Involvement and participation of land and forest dependent communities
8. Provision and development of capacity of all stakeholders
9. Provision and development of appropriate technologies and practices
10. Incentives and disincentives to promote equity and effectiveness of Land and Forest management
Jungle Rubber
- Unselected Seedling
- Unmanaged
- Trees/Fruits

Rubber Agroforestry System
- High Yield Seedlings
- Semi Intensive
- Trees/Fruits

Rubber Monoculture
- High Yield Seedlings
- Intensive
- Rubber Only
• Comprehensive (beyond sectoral) assessment of the future needs of development and its implications
• Reflection on Global Imperatives (e.g., Post 2015 Development Agenda)
• Adjustment processes to revise the ‘chart of account’ for Activity Planning and Budgeting
• Paradigm shift toward bottom-up planning process considering decentralization logic
• Establishment of a Green Development Monitoring System
NEVER FORGET THE RIGHT-HOLDERS!
Terima kasih

THANK YOU
